- Knowledge of SQL (Select, Delete, Update, Join, Insert, aggregate functions, sub-queries);
- Good knowledge of Java.
- Git / GitHub / Git Bash;
- Knowledge of DevTools, HTML, CSS;

### SUMMARY

I am a Manual QA Engineer with strong attention to details. Since I start testing, I learned how important is to be patient and a team player. I like new challenges, that made me want to learn more and more about this domain and improve my skills every day. My objective is to excel in a challenging and innovative QA work environment and aim to exercise my full potential. That's why I am looking for a company that will give me the chance to learn and develop myself as a Manual QA Engineer. As far as a job is concerned is that i want to work on a cool project, being in touch with a friendly team and just enjoy it. I started my path as a Java developer but in a while i realized that it's much more interesting to test code rather than create it. That's why i started learning testing theory on my own. I got involved with it and finally i found out what i would like to do.

### WORK EXPERIENCE
